I'm a software engineer with 4 years of experience as a full-stack engineer, as well as a front-end specialist. I've helped early-stage startups scale their tech stack and product to bring critical features to users and help find product market fit. I'm looking for a front-end or full-stack role at a remote-first company with an exciting product, where I can make a big impact while working with a talented and passionate team of engineers. In my free time, I like building privacy-focused and open-source apps and tools.

EXPERIENCE

MAY 21' – PRESENT
FRONT-END ENGINEER (PRODUCT), DEEPSOURCE (YC)
Worked on re-writing the front-end app in Vue and Typescript with Nuxt, and built several core product features. Worked closely with Designers to implement Figma mocks, and with backend engineers to put together GraphQL schema and API contracts.

MARCH 19' – MAY 21'
FULL-STACK ENGINEER, AVANTIS REGTECH
Built several products from the ground up using Django, PostgreSQL, Elasticsearch and React. Took ownership of multiple initiatives within the company, including modernizing the tech stack and implementing better developer tooling and practices.

EDUCATION

SEP 2018
BSC COMPUTER SCIENCE (DIGITAL SYSTEMS SECURITY), UNIVERSITY OF WOLLONGONG IN DUBAI
A core computer science program with a focus on cryptography, network security and secure application development.

SKILLS

- React / Vue (TypeScript)
- NextJS / Nuxt
- SCSS / TailwindCSS / Styled Components
- Redis, RabbitMQ
- Redux / Vuex
- Python / Django
- PostgreSQL / MySQL / SQLite
- REST/GraphQL
- Docker, Kubernetes
- Microservices / Serverless

PROJECTS

Keyspace (https://keyspace.cloud): A self-custodial cryptographic wallet for your online identity. Keyspace is a mobile app with a companion browser plugin, using cutting-edge modern cryptography and security architecture. Keyspace gives users an E2E encrypted vault to store, sync and autofill their logins, payment cards and notes, with true ownership of their keys via a 12-word mnemonic phrase.
